

PUBLIC NOTICE

CITYWIDE FLUSHING PROGRAM WILL START ZONE 2 ON APRIL 5, 2021

To assist in our primary mission of providing safe and reliable water to the community, the Public Works Department Water Division will start flushing on April 5, 2021 and is estimated to end on April 9, 2021. The flushing operation will take place at night when our records indicate water demand is at its lowest point and will take approximately four months to complete. Weekly notices, including door hangers to affected areas will be sent and posted on the City's webpage and other social media platforms.

City Crews will begin their activities on Monday at 10:00 pm and end them by 4:00 am the following morning, concluding on Friday of each week. The City is taking a number of steps to minimize the potential impact to water customers.

The area of operation is between Santa Ana Ave to the north, Independence Ave to south, Salt Lake Ave to the east and California Ave, to west, which is located in Zone 2. The attached map shows where Zone 2 is located in more detail.

While all steps have been taken to reduce the chance of a customer experiencing a water discoloration episode, customers in the impacted area are strongly encouraged to not use water during these times to the extent possible. Should you experience discolored water, we ask that you flush your own house pipes by running faucets for approximately 5 minutes or less. This should dispel any such discolored water that by small chance got into your house or business water pipes. Should you have continued water discoloration after flushing, please call our Public Works Department at 323-563-5790.

The flushing of water pipes is a standard procedure for water purveyors across the State. Our mission is simply to provide safe and reliable water to customers in South Gate.
